#### AMENDMENT OF DOCUMENTS BT-02 AND BT-06

Document BT-02, which includes qualifications required at the level of suppliers of products and services to GMP certified companies, has been amended.

The amendment to this document is the result of the recent signing of the mutual recognition agreement with EFISC. As a result of the mutual recognition, the EFISC certification has been included as possible qualification for suppliers of feed materials (and transport of their own products).

The application scope regarding the mutual recognition covers exclusively feed materials mentioned on the EFISC certificate, and produced in the following sectors:

- Vegetable oil and expellers;
- Production of starch.

Feed originating from other sectors, as well as activities other than production (trade e.g.) are not covered by the mutual recognition.

Please note: EFISC certified operators who are supplying products to an operator, certified according to GMP Animal feed, are also required to always apply document 'Country notes for OVOCOM'.

A GMP participant may only purchase feed materials from a EFISC certified producer, provided the product is listed on the EFISC certificate, and that the EFISC producer is active in one of the two sectors covered by the mutual recognition.

In the second amended document 'BT-06: Road transport: additional provisions' the term 'new cargo space' was added and clarified. For a new loading area (originating from the manufacturer, and which has never been used before for transport), a cleaning 'C' shall now be applicable, prior to a first use, instead of having to go through a complete release procedure.

For more details regarding the amendments, we refer to webpage "[GMP-Regulation](#)" where these documents can be downloaded.

The changes in these document are **highlighted in gray**. The newly published GMP documents can also be consulted in a version without marked changes
