## Monitoring of Aflatoxin B1 in maize

A reassessment of the risk classification of countries (see FCA-document '[BT-16: Temporary Monitoring](#)'), based on Aflatoxin results received, has led to the following changes :

The risk classification of **the Slovak Republic** changes from 'Medium' to 'Low'.

The periodic assessment is based on the received analysis results, which FCA certified companies are required to submit, and on analysis results from other feed certification schemes, and also on RASFF-notifications relating to Aflatoxin B1 in maize.

If your company, in the context of this protocol, has analysis results for Aflatoxin B1 in maize, be sure to send them to [info@ovocom.be](mailto:info@ovocom.be)! This also applies if you did not have the analysis performed yourself, but you've received the analysis results from your supplier.
